

COVID-19 VACCINATION HESITANCY

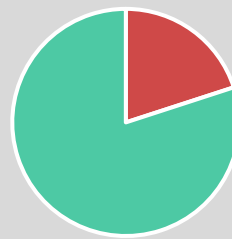

Vaccination hesitancy is the reluctance or refusal to be vaccinated. Vaccination hesitancy could create problems for the COVID-19 pandemic as herd immunity through widespread vaccination will be necessary to stop the spread of the virus.

HOW MANY PEOPLE DON'T INTEND TO GET A COVID-19 VACCINE?

25% OF AMERICAN PARTICIPANTS

20% OF CANADIAN PARTICIPANTS

WHAT IS ASSOCIATED WITH COVID-19 VACCINE HESITANCY?

-  NOT TRUSTING THE REPORTED BENEFITS OF THE VACCINE
-  WORRYING ABOUT POTENTIAL UNKNOWN EFFECTS OF THE VACCINE
-  CONCERN ABOUT PHARMACEUTICAL COMPANIES PROFITING
-  PREFERRING NATURAL APPROACHES TO IMMUNITY

WHAT MIGHT INCREASE COVID-19 VACCINATION RATES?

-  DEMONSTRATING THAT THE VACCINE WAS RIGOROUSLY TESTED
-  SHOWING THAT THE VACCINE IS SAFE
